

Modular Classrooms

**Hamilton
Southeastern
School
Corporation**

In a mere 69 days, Pac-Van designed and installed over 11,616 square feet of additional modular classroom space for the Hamilton Southeastern School Corporation. As you can see above, the exterior aesthetics were important to this client, so the color was carefully chosen to match the existing (and relatively new) school buildings. Eleven 24x48 classrooms were divided among three elementary schools in the district. A lot of extras were also included to make the buildings as safe and accessible as possible, including over 2,600 ft of decks, ramps, concrete sidewalks and landings. In addition to the deadline that was given, there was also a very small access area in which to place all the buildings. However, the experienced Pac-Van crew made it through.

Experience You Can Trust - Quality You Demand

When time is of the essence, the quick construction time of modular buildings make them ideal for school expansions. Pac-Van modular buildings are built from the same durable materials as traditional construction and meet all prevailing state and local codes.
