

Modular Expansions for Industry

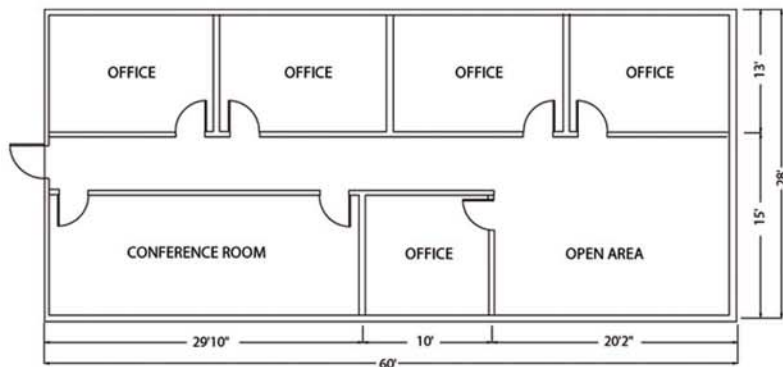

P&O Cold Logistics

Office Expansion
to Existing Facility

The objective of this permanent 1,680 sq. ft. modular building was to create a facility that was architecturally uniform to an existing building that was constructed conventionally. A parapet was added on-site to achieve the height of the existing building and to screen the mechanical equipment. Clear span construction was utilized to facilitate a center hallway. Exterior windows are dual glazed, tinted and sized to match the existing windows. The exterior's stucco finish is painted to match the original building. The layout includes four private offices, a conference room and a large common area. A large interior window adds to the openness of the structure. Due to good planning, it is difficult to tell where the original structure ends and the modular addition begins.

Experience You Can Trust - Quality You Demand

When time is of the essence, the quick construction time of modular buildings make them ideal for Industrial applications. Pac-Van modular buildings are built from the same durable materials as traditional construction and meet all prevailing state and local codes.
